

# PATENTPAK™

A CAS SOLUTION

## PRESERVE YOUR MOST VALUABLE RESOURCE – TIME

PatentPak™ is a **robust patent workflow solution** integrated with CAPlus<sup>SM</sup> on classic STN<sup>®</sup>.

- **Rapidly track down** the specific location of hard-to-find chemical information in patents with **interactive links to key substances**
- Instantly and securely access patent PDFs from **major patent offices**
- **Conveniently share** findings with other IP stakeholders – even if they don't use STN
- Find an **equivalent patent** in a **familiar language** with CAPlus global patent family coverage

### PatentPak on STN options:

- **PatentPak PDF** – More than 8 million original, clean PDFs from the PatentPak library
- **PatentPak PDF+** – The patent PDF, plus a table containing the important chemistry within the patent
- **PatentPak Interactive** – An interactive version of the patent PDF that highlights the specific location where each indexed substance is discussed

“I analyzed this entire patent and located the important chemistry so you don't have to.”

A CAS SOLUTION

## PatentPak Interactive Example

The screenshot displays the PatentPak interface for patent US 9,022,546 B1. On the left, a sidebar lists 'Key Substances in Patent' with analyst markup locations: CAS RN 72414-06-3 (Voranol 370, page 26), CAS RN 2177-70-0D (terpolymer, page 26), CAS RN 25767-47-9 (2-Propenoic acid, butyl ester, polymer with ethenylbenzene, pages 27 and 28), CAS RN 9003-53-6D (Benzene, ethenyl-, homopolymer sulfonated, sodium salt, page 28), and CAS RN 445378-05-2 (1,2-Ethanediamine, polymer with Pripol 1009, page 28). The main document view shows text from page 39 and 40, with a 'TABLE I' section. The table is titled 'Agarose Gel Ink' and 'Gel at High T or upon Water Evaporation'. The table has 5 columns for 'Example' (1-5) and 5 rows for 'Ink Components'. The components listed are Carbon Black (CAB-O-Jet 300, 14.9% solid), Voranol 370, Diethylenglycol Sulfonated polyester (36% solid), Amorphous Polyester Latex (36% solid), Crystalline Polyester Latex (35.0% solid), Phenyl Methacrylate Terpolymer Latex (36% solid), Styrene-N-Butyl acetate Latex (41.0% solid), KelcoGel AFT (gelling agent), SPRP-PSS, Triens HCL, Glycerol, Butyl Carbitol, and Water.

Ink Components	Example 1	Example 2	Example 3	Example 4	Example 5
Carbon Black (CAB-O-Jet 300, 14.9% solid)	20	25	30	20	20
Voranol 370	15	26	10	25	5
Diethylenglycol Sulfonated polyester (36% solid)	25	30	20	20	20
Amorphous Polyester Latex (36% solid)	18	18	13	15	18
Crystalline Polyester Latex (35.0% solid)					20
Phenyl Methacrylate Terpolymer Latex (36% solid)	15	15	13		
Styrene-N-Butyl acetate Latex (41.0% solid)					10
KelcoGel AFT (gelling agent)					
SPRP-PSS					
Triens HCL					
Glycerol					
Butyl Carbitol					
Water	7	16	4	10	15
	100	100	100	100	100
